

Revenue Overview

- ? Total revenue reached 10.70M across the cleaned sales dataset.
- ? Rice is the dominant driver, contributing 37.3% of total revenue.
- ? Oil and Beans provide the next largest contribution, while Yam is materially smaller.

Key Insights

- ? East is the strongest region, and West is the weakest performer.
- ? Monthly revenue shows visible peaks and troughs, with a softer finish in the later period.
- ? Top transactions are concentrated in high-value Rice orders.

Revenue Drivers

- ? Large Rice baskets remain the primary growth engine.
- ? Oil and Beans strengthen the revenue base but still trail Rice by a wide margin.
- ? High-value orders account for disproportionate revenue contribution.

Weak Regions

- ? West underperforms relative to the East benchmark.
- ? South remains slightly behind North, indicating room for targeted regional activation.
- ? The regional gap suggests inconsistent distribution and conversion efficiency.

Risk Analysis

- ? Product concentration risk is elevated because Rice dominates revenue.
- ? Regional imbalance can create growth ceilings in weaker territories.
- ? Revenue volatility across months may affect forecasting and inventory planning.

Strategic Recommendations

- ? Protect Rice availability and optimize pricing discipline.
- ? Replicate East-region execution tactics in West and South.
- ? Use bundles and promotions to lift Oil and Beans penetration.
- ? Track monthly decline signals early and reallocate trade spend dynamically.

Final Business Impact

- ? The sales intelligence stack turns inconsistent raw retail data into decision-ready insight.
- ? It enables faster reporting, stronger visibility, and more targeted growth actions.
